SHEDSAFE CERTIFIED ✓

IS IT SHEDSAFE?

Safer Sheds: Peace of mind for consumers

- ✓ We have formally committed to providing sheds designed to the Building Code of Australia
- ✓ Our design processes are regularly reviewed by an independent expert
- ✓ We have completed ShedSafe Training
- ✓ We stay abreast of changes to the Building Code of Australia
- ✓ We agree to random audits of our design process and standards

The Australian Steel Institutes Steel Shed Group has recently been reviewing shed designs to check for Engineering compliance, and have discovered some buildings recently sold have failed to meet the BCA requirements. In at least one case, the under design of the structural components was very significant.

Real Quality:

All Dinky Di Sheds are made from high tensile Blue-Scope Steel and will be custom designed specifically for you, your location and your intended use at no extra charge. Because our designs have been independently verified and ShedSafe approved, you can be sure that you get the shed you need without endangering your family, your neighbours or your valuable possessions. A full set of structural calculations are available free of charge with any Dinky Di Shed. These may aid in council submissions or in the unlikely event of an insurance claim. Please visit the consumer section of our website for more information.

Value without additional cost:

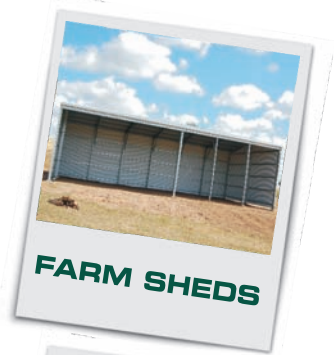

Dinky Di Sheds are a family owned national supplier which incorporates over 22 manufacturing centres and a national trucking network covering all major metro and regional centres of Australia. With our buying power and distribution centres you will be sure to receive the best possible value shed on the market today.

Raising standards in your local market:

In local markets where competitors are regularly undercutting your quotes by wrongly specifying their shed designs you can be reassured by the Safe Accreditation of Dinky Di Sheds!

Open Bay Farm Sheds:

All of our Open Bay sheds are designed to face all cardinal wind directions for your protection. Some manufacturers state that the openings must face to the Leeward side of the prevailing wind direction. For your safety, we do not assume there is any local shielding influence in our farm sheds.
